

Google Analytics (GA4) Checklist

Setting up GA4 so it answers real business questions, not just counts visitors.

SETUP

- ☐ A GA4 property is created and tracking code is installed on every page — verified in the Realtime report
- ☐ Cross-domain tracking is configured if a separate checkout or booking platform is used
- ☐ Internal traffic — you and your team — is excluded with an IP filter

REPORTING HABITS

- ☐ Traffic sources are checked monthly — where visitors are actually coming from
- ☐ Top landing pages and top exit pages are known, not assumed
- ☐ The focus is on what converting visitors have in common, not just total "Users"

CONVERSIONS

- ☐ Key actions are marked as conversions: form submits, phone clicks, purchases, bookings
- ☐ E-commerce tracking is enabled if the site sells online
- ☐ Conversion values reflect real business value, not just raw event counts

DATA INTEGRITY

- ☐ Data retention settings are configured — GA4 defaults can be shorter than expected
- ☐ Consent mode and cookie banner integration are correctly wired where required
